A useful entry although not enough for the level of trade and fewer than last week's bonanza! Trade held up well across the board.

Localised showers not of appreciable benefit.

It appears that Mancunians, Andy and Angie, are running the country and, would you believe it, Harry and Meghan are returning from the USA to swell the ranks of those who are on benefit!

BLUETONGUE NOTICE

Bluetongue virus serotype 3 (BTV-3) remains one of the most significant livestock disease challenges facing the UK in 2026. The current season has seen a rapid increase in confirmed cases, with 289 infected premises reported across the UK by 10 August, the vast majority occurring in England. The outbreak remains heavily concentrated in the South West, particularly Devon, Cornwall and Somerset, which account for most confirmed cases. Sheep are the species most commonly showing clinical disease and death, although cases continue to be detected in cattle.

Risk Assessment for South East England

The South East has generally achieved stronger vaccination uptake over both the 2025 and 2026 seasons, meaning a greater proportion of the regional flock and herd population enters this period with some level of protection. In some cases, natural field exposure, will have increased overall herd and flock immunity.

In addition, the livestock demographics of the region are also favourable.

As a result, the risk of widespread mortality and severe production losses is likely to be lower than that faced by livestock producers in the South West.

It is recommended by vets that all eligible sheep and cattle receive appropriate booster vaccination this season, particularly breeding stock.

Special attention should be given to purchased sheep originating from areas with little recent BTV activity or lower vaccination uptake, as well as breeding rams ahead of tupping. Vaccination remains the most effective tool available for reducing the impact of clinical disease and protecting flock and herd performance.

Importantly, based on the evidence currently available, the risk of fertility effects from vaccination to be negligible. In contrast, BTV infection itself is well recognised as a cause of reproductive and fertility losses in both sheep and cattle. Vaccination should therefore be viewed as a means of protecting fertility, not compromising it.

Warranty for stock through Hailsham Market

It is the responsibility of prospective purchasers to inspect the animals before purchase, to satisfy themselves that the animals they intend to purchase have no clinical signs of Bluetongue infection.

All Animals are sold “as seen”, with no warranties given for the presence of Bluetongue infection following the fall of the hammer.

*If you have any further questions regarding Bluetongue, please contact us on
01323 844 874 or 07890 359622*

Competitive Direct Drilling Service

Using our new Fentech's latest Agri Pneumatic 3m Drill (150mm spacing over 20 tines) we seed into all surfaces – grasses, clovers, brassicas, cereals, pulses, maize and all mixtures. The unique T-slot boot allows a perfect environment for the seeds to germinate, along its 3m sowing width with 20 rows (15cm).

This method saves time and money compared with more traditional re-seeding methods, but is also capable of stitching and rejuvenating existing crops.
